Summary

Four years of commercial experience as a software developer + 5 year Masters Program with CS major. Experienced in various development stacks, current specialization: **JavaScript**. Passionate about front-end development and related web technologies.

Professional Experience:

Front-end Consultant/Contractor

July 2013 - present

JustGo – startup focused on building social media management/analytics tools. Responsibilities: migration and development of the JustGo front-end using following technology stack: **JavaScript, AngularJS, Backbone, SASS/SCSS, HAML, Ruby on Rails**.

Tribe Coders – consultancy focused on providing “bodyleasing” services. Was in a role of Front-end tech Lead which included leading a front-end team in multiple projects which included following technologies: **JavaScript, PhoneGap, AngularJS, HTML5, SASS/SCSS**. Projects integrated with back-ends written in Ruby on Rails and Scala.

Implere Ltd.

March 2012 – June 2013

Position: Web Developer

Web development using various technologies: **ASP.NET, Azure, PHP, JavaScript, HTML5, SASS**. Areas: mobile content delivery, social networking, mobile applications, digital publishing.

PGS Software S.A

May 2011 – March 2012

Position: .NET Developer

Development and support of a CRM system for managing production lines, clients, online selling modules and delivery system management for Germany based organic food delivery company. Technologies used in this projects: **ASP.NET/MVC, WinForms, ADO.NET, EntityFramework, DevExpress**.

PGS Software S.A

Sep 2010 - Oct 2010

Position: .NET Developer (internship)

This was my 2 month internship. I did development for internal needs of the company. It was a web application which was built upon **ASP.NET MVC** framework as a frontend and a WebService as a service layer for client applications. I also was responsible for developing a library for PDF generation which was based on iTextSharp library.

Side projects:

smogalert.pl

October 2013

My pet project that I work on whenever I have a free moment. This service scraps and exposes air pollution data. Server side API and data scrapper are written in **Node.js** with **MongoDB** storage, the API is utilizing **Express** framework. Clients are mobile applications that visualize pollution data. Mobile apps are built using **PhoneGap** with **AngularJS**.

Nazar Gargol

Education:

2008 – 2013 - UITM, Poland, Rzeszów. CS major. Master thesis: "Performance comparison of NoSQL Document Databases: CouchDB, MongoDB, and RethinkDB"

2007 – 2008 - Fredericksburg High School, Fredericksburg, TX, USA (FLEX program, US Government scholarship)

Language Skills:

Fluent in spoken and written **English, Ukrainian, Russian, Polish** (all fluent in written and spoken forms), considering investing more time in learning **German**.
